

Abstract of the disclosure

A system of security information processed such that it can be understood by a person with insufficient knowledge about security technologies is provided.

5 The system comprises a vulnerability information storing unit for storing at least threat level values of vulnerabilities of a computer system to be monitored; a vulnerability information offering unit to extract vulnerability information to be applied to said computer  
10 system from said vulnerability information storing unit based on the configuration information of the computer system, and to associate the vulnerability information with this computer system; a vulnerability modification information storing unit for storing the information on  
15 whether or not a system manager has applied modification work based on this vulnerability information; and a security level computing unit for computing, regarding a specific equipment, a security level regarding a vulnerability of said equipment from a type of this  
20 equipment, the threat level value of the vulnerability that has not been modified with regarding this equipment, and the number or days while the vulnerability has been left without any modification taken.
